

W31-Creating Web Pages to Aid Instruction

This workshop is designed to assist you in developing your own web pages to use as an instructional and reference resource for the courses that you teach. This workshop will teach you how to create web pages either for instruction or other purposes. Participants will use Netscape Communicator 4.7 to create web pages. Netscape is free to teachers, students, educational institutions, and nonprofit organizations and is available for download at: <http://www.netscape.com>. Participants will import pictures, icons, and links into the web pages they create. The presenter will demonstrate how to publish the web pages onto a server. Handouts will be provided.
